

High Phosphorous Electroless Nickel Plating System containing 11 to 13 % Phosphorous

Dipsol introduces a new electroless nickel solution that exceeds the increasing demands for corrosion and magnetic resistant coatings. From aerospace to electronic applications, Dipsol's NiSol solutions offer ease of use and consistent operation from start to finish.

Dipsol NiSol 1101 Advantages

- » Low Stress
- » Superior Corrosion Protection
- » Outstanding Bath Stability
- » Very Consistent Plating Rate
- » RoHS, ELV & Reach Compliant

With the rising demand for increased corrosion protection, the NiSol 1101 process provides exceptional corrosion resistance and durability, while also providing a coating to meet the non-magnetic properties required for shielding applications.

This lead and cad free process comes in various options, full to semi matrix, pH non-regulating or pH self-regulating and can handle low to high bath loading.

Dipsol will work with your facility's production process for a tailored solution to maximize the bath performance for optimum output and quality.
